

CONFLICT MINERALS DECLARATION 2023
AGC GLASS EUROPE

AGC Glass Europe ("AGC") respects Conflict Minerals legislations.

Conflict Minerals are described as Gold (Au), Tantalum (Ta), Tungsten (W) and Tin (Sn) that are sourced from the Democratic Republic of Congo or adjoining countries from mines controlled by non-governmental military groups.

AGC regularly requires its supply chain partners to confirm that materials purchased by AGC do not contain Conflict Minerals and to provide declarations according to which the full supply chain process of the suppliers has been also examined to this purpose.

According to AGC' suppliers declarations (CMRT), they do not source from DRC or adjoining countries, or the referenced smelter is listed on the CFSI's smelter list, or they supply from recycled or scrap sources.

Based on Suppliers' declarations, AGC thus confirms that the minerals used in AGC process are not infringing the Conflict Minerals legislations.

We also confirm that AGC's current approach as regards Conflict Minerals' checking remains in place and is in line with the EU Regulation on Conflict Minerals.
